About the School

The total strength of students is 73.

There are total 4 teachers and 2 workers.

Total number of classrooms is 8.

Boys to girls ratio is 40:33.

As per government rule if the student strength is more than 300. Then they will provide a PT teacher, so there is no PT teacher in the school.

The teachers only organize the sports competition.

Lunch

Monday - Rice and Sambhar. Saturday - Pongal or
to Bisibele bath
Friday (Any one only)

Milk & food is supplied by an NGO called ADAMYACHETANA
run by Tejaswini Ananthkumar.

The drinking water is supplied by the corporation.

This water is filtered using a manual filter setup
in the school and is then used for drinking.

About the school. (contd)

The building of the school is not permanent. After construction of the new building, they will transfer the students & staff to that building.

The primary school is under government, high school is under the corporation.

The school is also one of the polio centers.

Toilets were separate for boys and girls and were clean and tidy.

Girls Toilet.

Per class room the strength is 20.

They have one black board in each classroom.

About the NGO - ADAMYACHETANA

Tejaswini Anantkumar is the founder and managing trustee of a Voluntary Organisation - Adamyachetana.

The key focus of this NGO is providing Anna-Akshaya-Ayogya to the underprivileged children.

Their Anna-Akshaya program runs 4 Kitchens to provide Mid-day meals to over 1.5 lakh underprivileged school children daily.

She also has switched to using Bio-fuels in the kitchen to eliminate the usage of LPG @ diesel - thereby contributing to environment.

This NGO is the largest in Karnataka.

Subjects taught in the school.

Kannada

English.

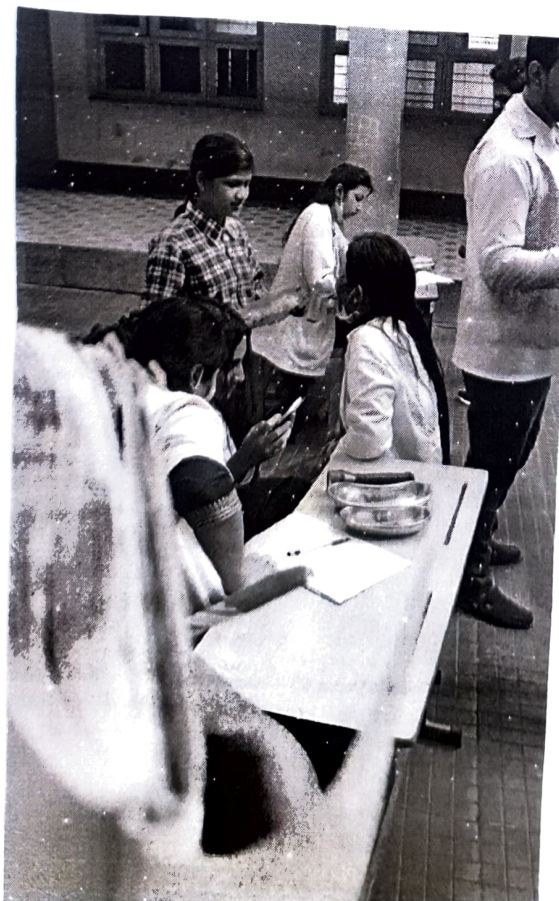

Maths.

Science.

Hindi

Social science.

Computers.

Observation

The school, classrooms, staff rooms was clean and well maintained.

Students were very much co-operative and well behaved.

Teachers were co-operative as well.

Suggestion

Sanitation of the toilets must be improved.

The food provided to the students can be increased.

- Once in a month a government supervisor will do inspection on anganwadi activities.

THE ASHA WORKER

Name: chaitra

Qualification: PUC

Age: 25years

Working period: 2years

Training: magadi road leprosy hospital

The ASHA worker comes during her free time. Each month they have a target of registering 3 mother cards. They enquire about regular checkup.

OBSERVATION

The anganwadi is neat and clean. The staff members were cooperative and enthusiastic. The records are well maintained.

CONCLUSION

It was our first visit to anganwadi and a good exposure to know what anganwadi is and how it works. It was well maintained, hygienic and organized. The staff was very helpful, cooperative and provided us with all the required information. The centre is providing all the required facilities for children and pregnant women and also serves us a good platform for improvement in their lifestyle and nourishment of the children in rural and urban areas.

25th August 2021

INTRODUCTION

→ We the students of Dayananda Sagar College of Dental Science IIIrd yr BDS, as a group of Resna A.P, Anjana Saji, Ashwini Madhavan, Anathy Ajayaram, Sumrtha Elizabeth Mathew, Anusree k.s Visited a private dental clinic 'VANI'S DENTAL CLINIC'.

→ This report includes my experience and observation during dental clinic visit.
→ Visit to a dental clinic helped us to gain knowledge about the basic setup of a dental clinic and establishment procedures and working of the dental clinic.

DETAILS OF THE VISIT

LOCATION: VANI'S DENTAL VISIT,
PADMANABHA NAGAR,
WARD NO: 182,
10th CROSS, KUNARASWAMY LAYOUT
IIND STAGE
BANGALORE:

VISITING TIME: 10: am

WORKING HOURS: 9-12am } Monday - Saturday
2-5pm }
Sunday - Based on Appointment.

PRACTIONER: Dr. Nivea Naiker
BDS

Dr. Vani, BDS MDS, Endodontist

VISITING DOCTORS:

Dr. Shobha - Oral Surgery

Dr. Haasha - Periodontics

Dr. Sasikala - Orthodontics

DENTAL AUXILIARY

ATTENDER: Rajalakshmi.

CLINICAL DESIGN.

→ The clinic has got a Reception, Well Ventilated, with sufficient number of chairs, a laboratory, a shoe rack, an Examination room, CCTV, Washroom. The Examination room is well furnished with Dental Chair and X-ray Machine.

RECEPTION: Reception is beautifully furnished with cushions and chairs. There is sufficient number of chairs, and a shoe rack to keep the foot wear.

OPERATORS

→ Visiting doctors - 3.

→ Two doctors - Attending doctors

→ One attender

STERILIZATION:

→ Instruments are sterilized by boiling in water and autoclaving. Not well established.

→ UV Sterilization is established.

→ Boiling Sterilization in boiling water - 3 times a day

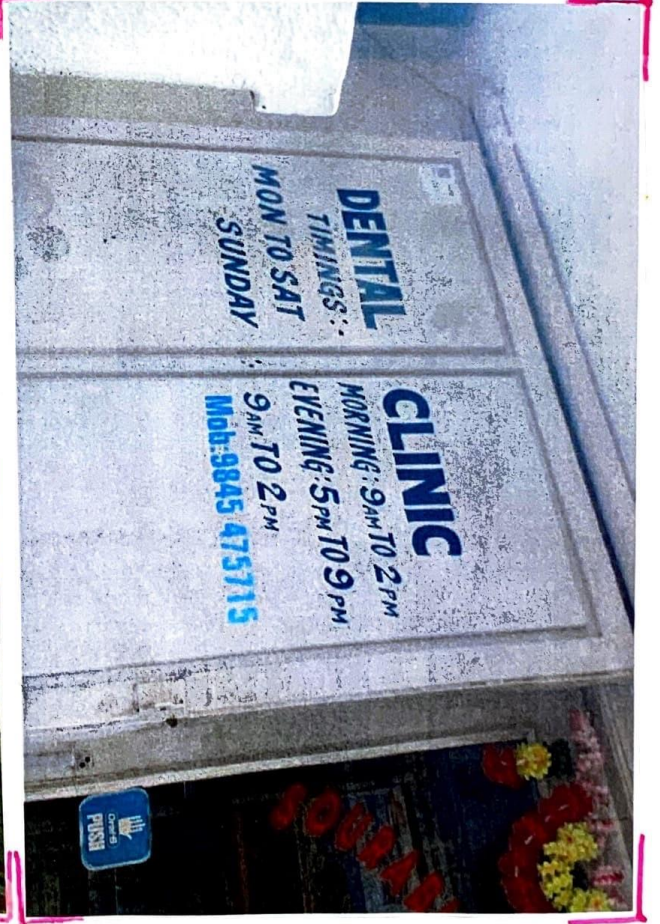

* Morning - 9am

* Afternoon : 12:30pm - 1pm

* Night : 8:30pm.

*Its part
well aligned
pics*

PATIENT RECORDS.

- The record of Outpatient are maintained in a record book.
- Timings of Visit are noticed.

PAYMENTS

- Only in Cash

LABORATORY ROOM

- Well furnished with tiles.
- Neat and Clean where the Instruments for Sterilization are kept.

DENTAL CHAIR

- Dental Chair - Most Modern
- Sensor light, 3 chair Control, 2 Suction, Temperature Control for Water. Acrotor.

X-ray Machine

- An X-ray Machine for Intra Oral Periapical Radiograph making is established; which is connected to a computer for three-Dimensional Visualization.

SUPPLY OF EQUIPMENTS

- Dental Material supplied in Agents; normally
- Materials are also imported from Calcut.

MONTHLY EXPENDITURE

- 25,000/-

ALTERNATE POWER SUPPLY

- An Inverter is kept as an Alternate ^{mode of} Power power.

WASTE DISPOSAL

→ Any person agent of the Waste Disposal Department used to collect the Dental waste everyday.

SETTING UP THE CLINIC

- Total cost 40 Lakhs excluding the Dental Chair and Equipment
- Dental Chair - 2 -
Each 2 lakh Rupees.

DISINFECTION OF THE CLINIC

- Cleaning and disinfection of the floor using Disinfectant
- Use of Spirit to clean up the dental Chair and X-ray tube.

WATER SUPPLY

→ Bore Well.

PAYMENTS / CHARGES FOR DIFFERENT PROCEDURES

- Amalgam restoration Rs 400-500/-
- GIC restoration : Rs 400-500/-
- Composite restoration : Rs 1000/-
- Surgical removal of Impacted teeth
 - Lower Jaw - Rs 3500 - 5500/-
 - Upper Jaw - Rs 2500 - 3200/-

→ Scaling: Rs 500/-

Retainer:

→ ED treatment: Rs 16,000/-

→ Orthodontic treatment = Rs 16,000/- average.

→ Ceramic Orthodontic brackets = Rs 30,000/- including final procedures
+
Rs 1000/- Retainer.

STORAGE COPBOARDS.

→ There are Cupboards, Shelves in which Materials were stored orderly and some sterilized instruments protected by UV Sterilization.

CONCLUSION:

→ The Clinic is well designed, Well equipped, Small but well maintained and Centrally located.
→ Sterilization techniques used are not well established and we recommend for better Sterilization Techniques.

A VISIT TO BANGALORE DAIRY

By,

Samarth .P

3rd BDS

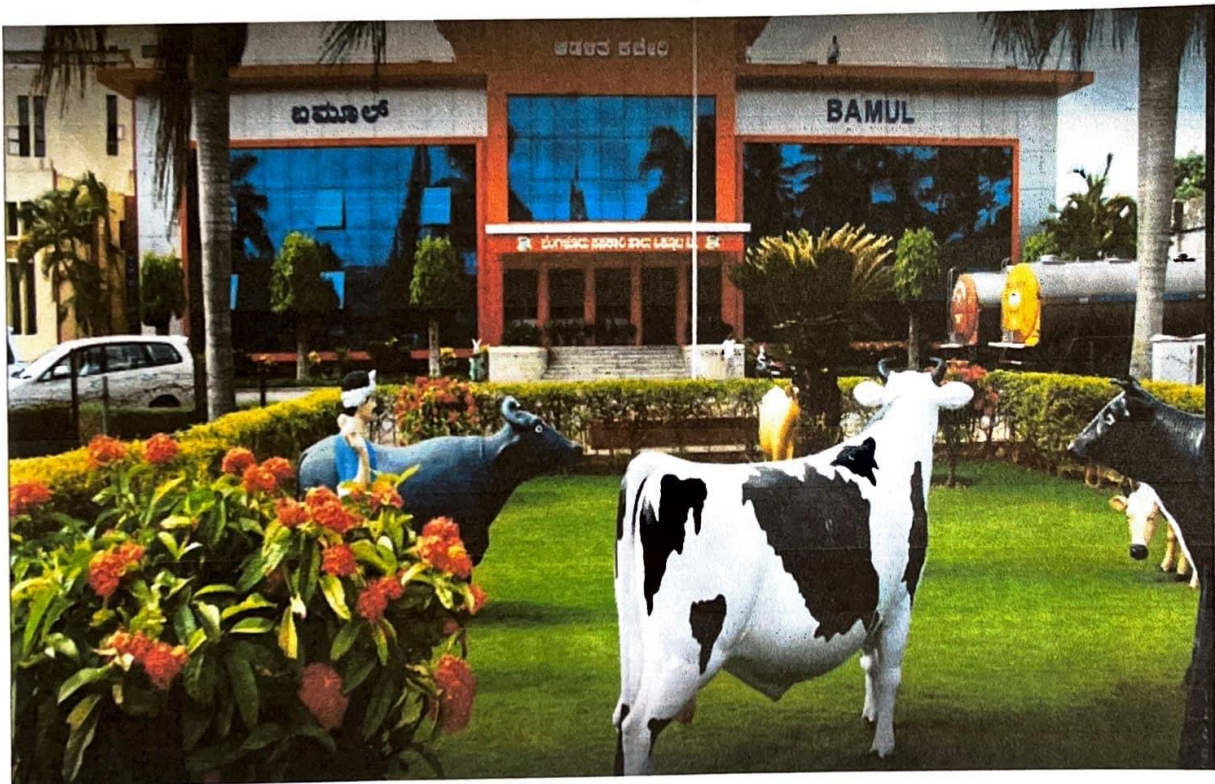

17D1636

29 - 07 - 2021

INTRODUCTION

Dairy farming is a class of agriculture for long-term production of milk, which is processed (either on the farm or at a dairy plant, either of which may be called a dairy) for eventual sale of a dairy product.

Although any mammal can produce milk, commercial dairy farms are typically one-species enterprises. In developed countries, dairy farms typically consist of high producing dairy cows. Other species used in commercial dairy farming include goats, sheep, and camels. In Italy, donkey dairies are growing in popularity to produce an alternative milk source for human infants.

ABOUT THE VISIT

Karnataka Milk Federation (KMF) sells products such as pedha, paneer, curds and milk in the name of Nandini. It is a federation of milk producers association working on cooperative principles. Almost every district in state of Karnataka has milk producing co-operatives. The milk is collected from farmers who are its members, processed and sold in the market by the brand of Nandini. It is the second largest milk co-operative in India after AMUL.

- The Dairy farm was inaugurated by the then PM LAL BAHUDHUR SHASTRY in the year 1974.
- The farm was handed to KMF in the year 1984.
- The KMF has 14 unions and they are:
 1. Bangalore
 2. Mysuru
 3. Mandhya
 4. Kolar
 5. Tumkur
 6. Hassan
 7. Dharwad
 8. Belgaum
 9. Bijapur
 10. Vijapur and Bagalkot
 11. Dakshina kannada
 12. Raichur
 13. Shimoga
 14. Chamaraja District

Statistics

- Bamul is marketing milk and milk products in the brand name of "Nandini" through 1280 retailers, 38 Franchisee Outlets, 26 Milk Parlours, 240 distribution routes.
- The milk procurement price paid is Rs.21.66 for every Kg of milk supplied by the Union. Which is 80% of total cost of production.
- The milk procurement has increased by 11% when compared to the last year.
- The Unions daily average milk procurement is 9.40 lakh Kgs, which works out to be 510 kgs per day per DCS.
- Bamul has SEVEN Chilling Centres geographically located around Bangalore and 85 Bulk Milk Coolers at DCS Level.
- Milk collected at DCS will be transported to Chilling Centres, through 110 Milk Procurement Can Routes, by traveling 18,410 KMs every day. 23 Bulk Milk Cooler (BMC) Routes are also in operation, which collects milk from 121 BMC centres of 344 DCS directly transported to Bangalore Dairy through insulated tankers.
- As on NOVEMBER 2012 there are 1886 DCS in these DCS, there are 3,39,906 milk producer members are enrolled and out of which 1,11,585 are women and 45,216 members belong to Schedule caste and 15,648 members belongs to schedule Tribes.

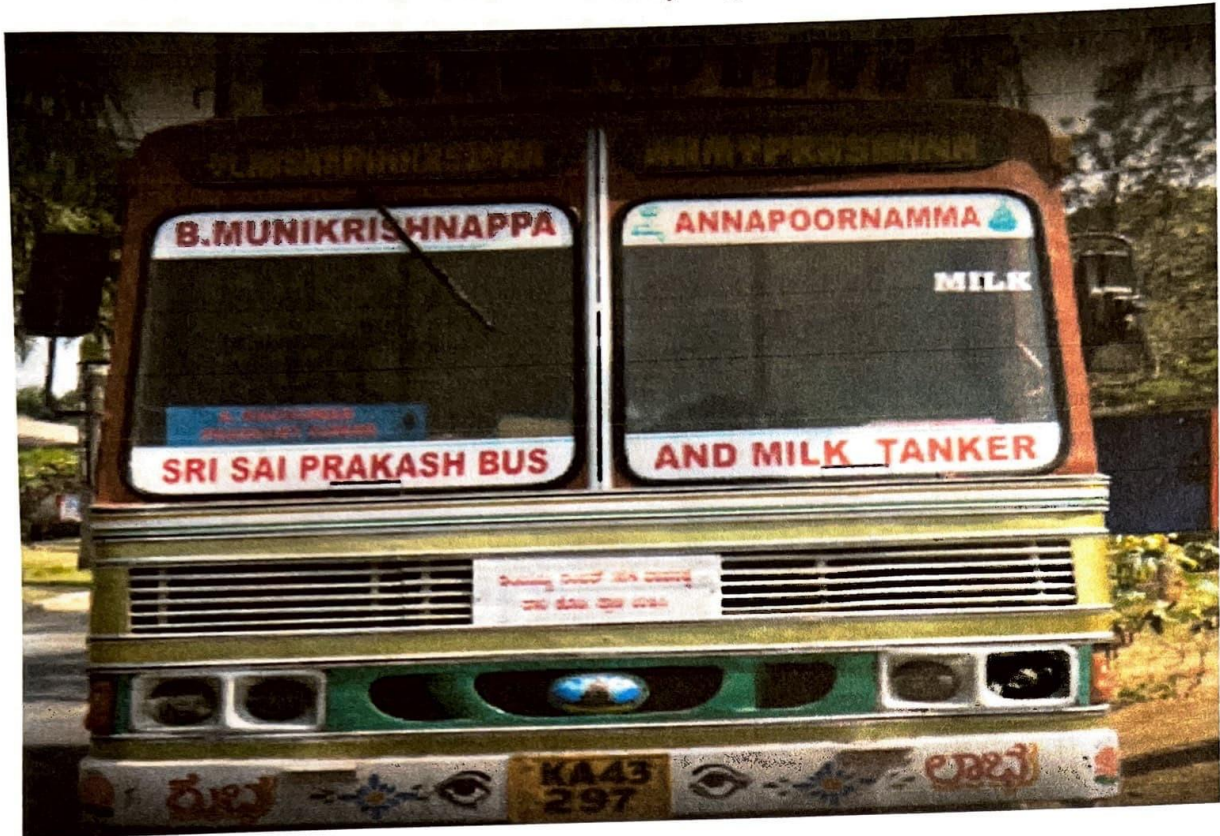

- In these DCSs, there are 3,35,944 milk producer members. Among them 1,09,988 members are women and 664 members belong to schedule caste and 15,530 Schedule Tribes.
- The milk shed area of Bamul comprises of 2611 revenue villages. As of now the Union has organized 1868 Dairy Co-operatives Societies (DCS) in 2425 villages, there by covering 87% of the total village in these two districts.

DAIRY CO-OPERATIVE SOCIETY

- 10 villages come under 1 DCS
- Everyday milk is dumped, and it is chilled to 7 degree in the DCS for storing.
- This is then transferred into the insulating vehicles and the transferred to Bangalore Dairy.

- Under Bangalore dairy there are 2100 DCS
- In the DCS many tests are done to check for the quality of the milk being dumped. After obtaining report, again test is done in Bangalore dairy.
- 1 truck has 1lakh milk carrying capacity.

TYPES OF MILK

There are basically 5 types of milk available:

1. BLUE PACKET: Maximum sale
3% fat, 8.75% SNF
2. ORANGE PACKET: 4.5% Fat, 8.75% SNF
3. GREEN PACKET: 3.5% Fat, 8.5% SNF
4. YELLOW PACKET: 4% Fat, 9% SNF
5. FAMILY SPECIAL PACKET:

* Milk was available in 200ml

½ L

1L

6L jumbo packet

- Curds are also available: 3% Fat, 10% SNF.

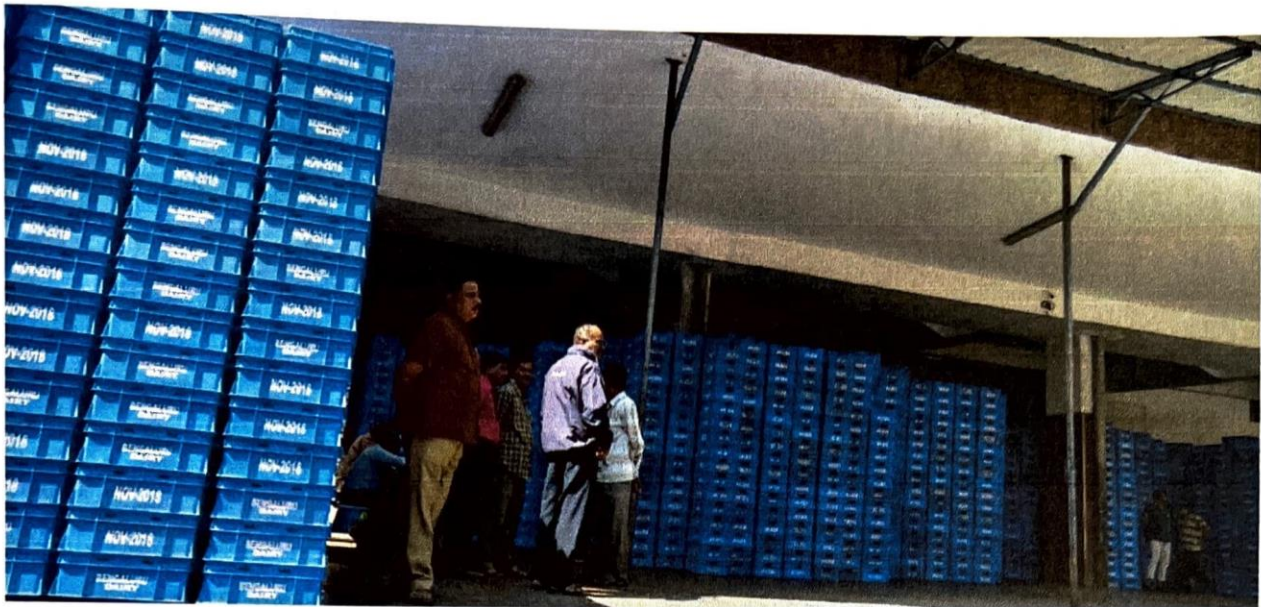

There were huge milk storing flasks called Tyros and they were usually used to store milk during production.

STORAGE

The milk and milk products are stored in cold storage at a temperature of -7 degree

- **VISSION: Model Co-operative Milk Dairy in the Country**
- **MISSION: Ushering Rural Prosperity in the lives of Member Milk Producers**
- **Bamul is also organizing Consumer Awareness Programme as a part of Market Development to create awareness of "Nandini" Milk through personal contacts, Door to Door campaigns, Organisational Meetings, School Children Mega Dairy Plant visit etc., are conducted regularly.**
- **Milk Product Block within the campus to manufacture Butter, Ghee, Peda, Flavoured Milk, Spiced Butter Milk, Paneer, Set Curds etc.,**
- **Bamul has planned new project to convert Hosakote Chilling Centre into a 2.0. LLPD Capacity Dairy with an investment of Rs.2427.00 Lakh and a New Product Block at Bangalore Dairy Premises with an investment of Rs. 2033.00 Lakhs.**

- **Mega Dairy with a capacity to process 6 lakh litres of milk per day expandable to 10 llpd has been built by investing Rs. 38.70 crores. The Mega Dairy has latest state-of-the-art technological facilities in dairy processing and the Union will have the ability to manufacture milk and milk products to world class standards.**
- **The strategy of Bangalore Milk Union is "Procure More, Sell More & Serve More" and reaping the benefits of economies of scale.**
- **Importance has been given to enrol more and more milk producers in the villages as members of these DCSs. While enrolling these members, more emphasis is being accorded to enrol a greater number of women members and to organize more women managed DCSs under STEP (Support to Training and Employment Program for Women).**
- **Ultimately, the complex network of co-operative organisation should build a strong bridge between masses of rural producers and millions of urban consumers & achieve a socio-economic revolution in the village community.**
- **Achieve economies of scale of rural milk producers by ensuring maximum returns and at the same time providing wholesome milk at reasonable price to urban consumers.**
- **The philosophy of this co-operative milk producer's organisation is to eliminate middlemen and organise institutions owned and managed by milk producers, by employing professionals.**

Other products of Bangalore dairy are:

1. PEDDA
2. PANNER
3. ICE CREAM
4. BUTTER
5. KUNDA
6. LASSI, BUTTERMILK etc.

CONCLUSION

The Bangalore dairy is one of the biggest dairy farms in India. The hygiene and equipment's are highly sophisticated and are one of the best in the country. It is also considered a non-profit organisation. The government provides various facilities to the farmers for dairy farming like cow sheds, cow insurance, fodder etc. One can become a KMF agent with just a nominal fee of 50,000 rupees in the name of MD BAMUL.

VISIT TO PRIMARY HEALTH CENTRE

BY,

Kruthi M S

IV BDS

16D1629

Professor & HOD
Department of Public Health Dentistry
Jnananda Sagar College of Dental Sciences
Kumaraswamy Layout,
Bangalore - 560 078.

INTRODUCTION

Primary health centre is

“Essential health care based on practical scientifically sound and socially acceptable methods and technology made universally accessible to individuals and families in the community through their full participation and at a cost that community and the country can afford to maintain at every stage of their development in the spirit of self-reliance and self-determination”.

(ALMA-ATA, 1978)

Four pillars of primary health care: -

- *Active community participation.
- *Intra and Inter sectoral linkages.
- *Use of appropriate technology.
- *Support mechanism made available.

Principles of PHC: -

- *Equitable distribution.
- *Community participation.
- *Intersectoral Co-ordination.
- *Appropriate Technology.
- *Focus on prevention.

Equitable distribution: -

Healthcare services must be equally shared by all the people of the community irrespective of their race, creed or community status. This concept helps to shift centre of gravity of healthcare from the

cities to the rural areas where the most needy and vulnerable groups of the population live.

Types of PHC

PHCs may be of 2 types, depending upon the delivery case load

TYPE A and TYPE B.

TYPE A PHC: PHC with a delivery load of less than 20 deliveries in a month.

Presently there are 23,109 PHCs in India. 1156 of them are in MP. Out of which 10 come under the capital.

Function of PHC: -

*OPD services: 4hrs in the morning and 2hrs in the afternoon and evening.

*24hrs emergency services.

*In-patient services =6 beds.

*Maternal and child health care including family planning.

*Medical termination of pregnancies.

*Nutrition services.

*Adolescent health care.

*Immunization services provided.

*health education.

*Prevention and control of endemic diseases.

ABOUT THE VISIT: -

Field trip venue: PHC, NR Colony, Basavanagudi, Bengaluru, Karnataka 560004.

Guide: Dr SMITHA.

Date: 21 December 2021

Schedule: start-10:00 am

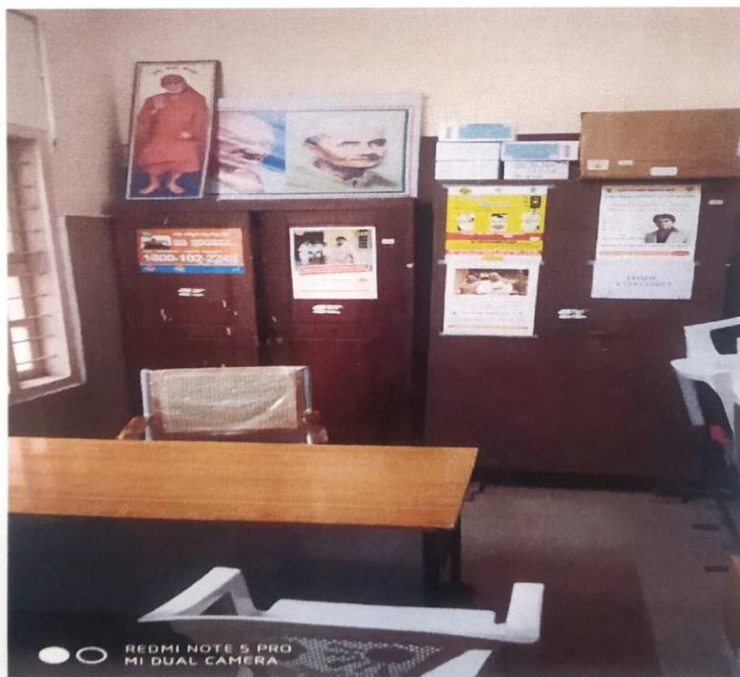

End -12:30pm.

Description: -

The primary health centre which we the students 3rd BDS visited has 2 floors

1st floor- maternity hospital, 2nd -PHC and it had the following:

1. Waiting room: It was a spacious room with chairs. There were health related educative charts displayed on the wall. There was also a chart depicting the facilities available, time table about immunization were put up. Drinking water was available.
2. Consultation room: It was a spacious room with a bed, BP machine, Torch and some medicines.

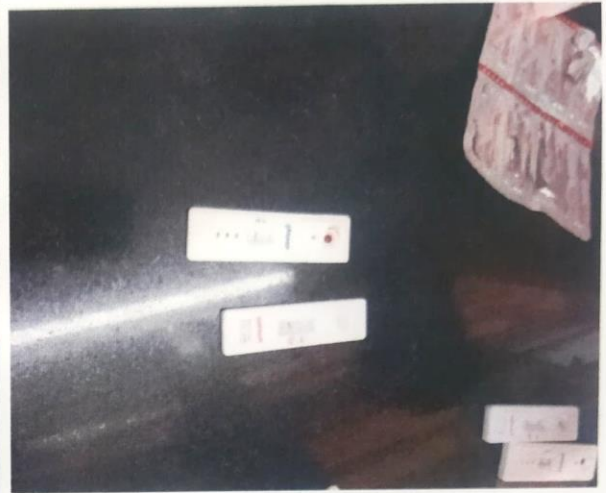

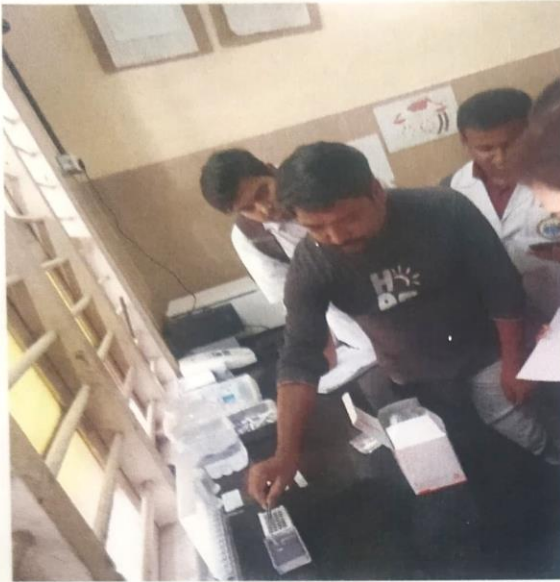

3. OT room, post op room and inpatient department: The OT room is well equipped and usually C-section and labour operations are conducted. The in-patient ward had 10-12 beds with good facilities.

4. DOTS centre: It is a room where TB patients are treated. 30 cases were recorded last year. TB investigations are done in the same hospitals and they are given medicines. Proper follow up is also done.

5. Laboratory: Many investigations are done here.

*OPV

*Penta

*DPT etc.

8. Dental Clinic: It is well equipped with a dental chair and other dental instruments. DCSDS is in charge of the clinic and is providing effective treatment for free.

9. Physiotherapy clinic: It is also conducted by DayanandSagar

institution and it is well equipped.

10. Programmes:

- *Surveys
- *Vaccine camps
- *Health camps
- *Family planning program
- *pulse polio
- *School health program
- *Awareness about dental health
- *Immunization.

11. Dialysis room: It was well maintained dialysis ward and the cost

of each session is Rs550.

Conclusion: -

It was a great experience to visit PHC. It was well maintained, and cleanliness and hygiene are the best part of the PHC. It also provided all required services for the patients and it also served as a good platform for spreading awareness to the patients about health education.

No.ACA/DCD/SYN/DSCDS-B/D036/PG/2021-22

Dated: 26/07/2022

The Principal
Dayananda Sagar College of Dental Sciences
Shavige Malleshwara Hills, Kumaraswamy Layout
BANGALORE - 560 078.

Sir/Madam,

Sub : Synopsis Review report for 2021-22 - PG Medical

Ref : 1. AUTH/Revised Ordinance - MDS Course - 371/2008-09, Dated : 16/03/2009
2. RGU/PG/ADM/COE/2021-22, Dated: 29/01/2022
3. DSCDS/SYN/2022/210, Dated : 15/06/2022

With reference to above, the registration status of the synopsis of student/s of your College/Institute of Academic year 2021-22 is enclosed herewith,

For synopsis status as mentioned "**Provisionally Registered**" the student shall start her/his study as per the synopsis submitted by attending the observations and remarks and incorporating the same in dissertation.

For synopsis status as mentioned "**Not Registered**" that student shall "**Resubmit**" the same within 15 days of this letter or before starting her/his study whichever is earlier.

You are hereby instructed to communicate the same to the students about their synopsis status and do the needful. The Principal shall be responsible to adhere the timelines mentioned.

DIRECTOR, DCD

14	DR. V. GEETHA	DR RANJINI M A DESG : READER	COMPARATIVE EVALUATION OF MICROLEAKAGE IN CLASS II CAVITIES RESTORED WITH SNOW FLOWABLE OR PREHEATED PACKABLE BULK FILL COMPOSITE RESIN AS GINGIVAL INCREMENT BY DYE EXTRACTION METHOD AN IN VITRO STUDY	STATUS: PROVISIONALLY REGISTERED OBSERVATIONS : CLINICALLY RELEVANT BUT DYE LEAKAGE STUDIES SHOULD BE AVOIDED REMARKS : 1. TITLE OF TOPIC CORRECTION(INCREMENT) THERE ARE TWO MM IN IT	PROVISIONALLY REGISTERED PLS INCORPORATE THE OBSERVATIONS & REMARKS COMMENTS AS PER REVIEWER IN DISSERTATION STATUS OF ADMISSION- APPROVED
COURSE : MDS PROSTHODONTICS					
15	DR . SUJANA . S	DR SARANDHA. D.L DESG : PROFESSOR	COMPARATIVE EVALUATION OF TEAR STRENGTH OF TWO PLATINUM BASED MAXILLOFACIAL SILICONE MATERIALS - SILOCZEST LSR WITH AND WITHOUT ADDITION OF 2-2.5% ZINC OXIDE (ZNO) NANOPARTICLES AND TECHNOVENT (M511) AN IN VITRO STUDY	STATUS: PROVISIONALLY REGISTERED OBSERVATIONS : NIL REMARKS : GOOD WELL DESIGNED STUDY	PROVISIONALLY REGISTERED STATUS OF ADMISSION- APPROVED
16	DR MONIKA N	DR SREEHARSHA. T.V DESG : READER	COMPARATIVE EVALUATION OF MARGINAL FIT OF 3 D MILLED ZIRCONIA COPINGS FABRICATED USING DENTSPLY SIRONA LAB SCANNER AND SMILEBOX INDIGENOUS LAB SCANNER-AN IN-VITRO STUDY	STATUS: PROVISIONALLY REGISTERED OBSERVATIONS : PLEASE CORRECT 1.REFERENCES SHOULD BE IN VANCOUVER FORMAT 2.ETHICAL CLEARANCE YOU HAVE MENTIONED AWAITED WHEN YOU HAVE ATTACHED A CERTIFICATE 3. PLEASE INCLUDE TIME LINE CHART REMARKS : SATISFACTORY	PROVISIONALLY REGISTERED PLS INCORPORATE THE OBSERVATIONS COMMENTS AS PER REVIEWER IN DISSERTATION STATUS OF ADMISSION- APPROVED

DIRECTOR, DCD 26/7

LIST OF

DISSERTATION PROJECTS

**SUBMITTED TO RGUHS AS A PARTIAL
FULFILMENT OF MDS CURRICULUM**

FOR THE YEAR 2021-22

DAYANANDA SAGAR COLLEGE OF DENTAL SCIENCES

(Affiliated to Rajiv Gandhi University of Health Sciences, Karnataka)
(Recognised by Dental Council of India, New Delhi)

April 3, 2023

TO WHOMSOEVER IT MAY CONCERN

This is to certify that, these are research projects completed and submitted to RGUHS in the year 2021/2022 by post graduates students as a partial fulfilment of MDS curriculum and the same as been uploaded as e-dissertation document to the LIBSOFT of the college library e resources.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Evaluation Of Scaling And Root Planing With Or Without Glycine Powder Air Polishing In The Improvement Of Periodontal Parameters Among Patients With Mild To Moderate Periodontitis - A Split Mouth Randomized Controlled Trial" with Dr. V. Pani Pranavi as the primary investigator and Dr. Sunil S, Department Periodontology as the Guide.

Dental plaque is the critical etiological factor in the initiation and progression of periodontal disease. Scaling and root planing (SRP) using conventional curettes or ultrasonic scaler remains the mainstay treatment in the elimination of plaque biofilm.

Though, SRP is considered to be gold standard in the elimination of dental plaque, it might not provide thorough debridement in all periodontal pockets. Since the SRP procedures are time consuming and causes loss of root material over a period of time, an alternative technique which is simple & faster can be a useful tool in our periodontal treatment protocols. Such a technique can be invaluable for maintenance therapy patients also where regular SRP will be needed.

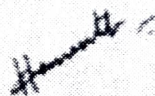

In this regard, glycine powder air-polishing (GPAP) has been tried to maximize the effectiveness of biofilm removal. Glycine powder contains biocompatible organic salt crystals with an average size of 25 µm and its abrasiveness on root surfaces is about one-fifth of that of sodium bicarbonate powder crystals. Glycine powder air polishing (GPAP) reduced the number of viable bacteria in periodontal pockets with probing depths (PDs) ranging from 3 to 5 mm and to a significantly greater extent than SRP using curettes. Hence this study is intending to evaluate the efficacy of SRP along with GPAP and SRP alone in the improvement of periodontal parameters among patients with mild to moderate periodontitis.

Periodontitis is an inflammatory disease of the supporting structures of the periodontium that is initiated by bacteria that form a biofilm on the surface of the teeth. Studies have proposed that the host response, rather than the bacterial burden, is the principal determinant of the disease. Hence there was a shift in the understanding of periodontal disease, from a purely infectious disease paradigm to an inflammatory disease paradigm. Eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA) are resolvins which aid in resolving inflammation in the body.

Scaling and root planing which has been considered as the 'gold' standard procedure in non-surgical treatment is not sufficient in the presence of tissue invading pathogens, hence adjunct therapy like LDD is effective. Flax seed which is rich in Omega 3 PUFAs (EPA and DHA) could be used as a potential agent in the treatment of periodontitis due to its pro-resolving and anti-oxidant properties. Hence in this study, an attempt is being made to evaluate the efficacy of Flax seed extract gel in the form of LDD by evaluating the pro-resolvin properties by measuring the EPA and DHA. Both the control and test groups will undergo scaling and root planing at baseline, and the test group will undergo treatment with flax seed extract gel.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparative Evaluation Of Fracture Resistance Of Overly Flared Endodontically Treated Fractured Anterior Teeth In Three Different Esthetic Posts - An Invitro Study.." with Dr. Kevin Abraham Saju as the primary investigator and Dr. Krishna Kumar G.R, Department of Conservative Dentistry & Endodontics as the Guide.

Overly flared canals can result from early pulpal necrosis in young permanent teeth, due to over instrumentation, improper retrieval procedure for separated instruments or during post space preparation- restoration of all of which is a challenge. Such weakened teeth need rehabilitation of the remaining radicular dentin to provide strength to withstand masticatory load without fracture. An apically snugly fitting Prefabricated fiber post in overly flared canals results in excessive resin cement coronally and volumetric shrinkage resulting from the same. To overcome this disadvantage, newer post systems constituting of an assembly of thin pin posts that occupy the available post space entirely and decrease the amount of resin luting cement have been tried. Rebuilda Post-GT is one such post system consisting of bundled fiber posts that can be splayed during placement, suitable for all types of root canals with atypical anatomy. Dentapreg PIN Posts are another pre-cured flexible glass fiber reinforced composite accessory posts of diameter 0.45 mm that conform to the curvature of the root canal. Individual studies evaluating the fracture resistance of ETT with the use of these posts has shown promising results. However exploration of available literature to the best of our knowledge, there are no studies comparing the fracture resistance provided by these 2 post systems in overly flared canals. Hence, we intend to compare and evaluate the fracture resistance of overly flared Endodontically Treated fractured Teeth restored with prefabricated Glass fiber, Dentapreg Pinpost and Rebuilda GT posts. The current invitro study will assess and compare the fracture resistance in overly flared fractured anterior tooth restored with prefabricated fibre post, rebuilda GT posts, Dentapreg PIN post

Ref: 154-IRB-2022

Date: 14-06-2022

Dr Payal Das
 1st MDS
 Department of Conservative Dentistry & Endodontics
 Batch 2021
 Dayananda Sagar College of Dental Sciences (DSCDS)
 Bengaluru

The Institutional Review Board (IRB) meeting was held on 13-06-2022 from 9.30am to 12.30pm in the Seminar Hall, Department of Orthodontics, 5th Floor of DSCDS and the meeting was chaired by Dr. Chandrashekar Janakiram. The following members of Institutional Ethical Committee (IEC) attended the meeting.

1	Dr. Chandrashekar Janakiram	Chairperson
2	Dr. Nagesh.L	Member Secretary
3	Dr. Vasundara	Pharmacologist
4	Dr. Rajeshwari.N	Basic medical scientist
5	Mrs. Tara Madusudhan	Sociologist
6	Mr. Subramanya Prasad	Advocate
7	Mr. M.S. Sridhara	Religious Person and Philosopher
8	Mr. Nagesh Puranik	Layperson

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Stress Distribution In Endodontically Treated Mandibular First Molars With Different Minimally Invasive Access Preparations Restored With Bulk Fill Composite Material: A Finite Element Analysis." with Dr Payal Das as the primary investigator and Dr.Vedavathi B, Department of Conservative Dentistry & Endodontics as the Guide.

Traditional access preparation designs result in inadvertent loss of sound tooth structure, thereby decreasing the fracture resistance of Endodontically treated tooth (ETT). With the aid of Magnification, CBCT, Ultrasonic irrigation, latest adhesive technology and composite resin material - minimal access preparation designs have become a reality. These conservative preparations ensure longevity of ETT. However, there are many controversies regarding the same. Also, the use of the latest bulk fill composite materials can have a lot of impact on the technique sensitivity, bonding to tooth and fracture resistance of ETT. The current Finite Element Analysis will assess and compare the stress distribution in Endodontically treated mandibular first molars with different minimally invasive access preparations restored with bulk fill composite material.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Stress Pattern In Endodontically Treated Mandibular Firstmolars Restored Usingdirect Bulk Fill Composite Resin Onlay With Varying Intraradicular Extensions-A Finite Element Analysis." with Dr. Nithya R as the primary investigator and Dr.Swapna D.V, Department of Conservative Dentistry & Endodontics as the Guide.

Intra radicular posts are usually not indicated for endodontically treated teeth (ETT) with less clinical crown height or ones with short or curved roots. Onlays capping the cusps with intracoronal/ intraradicular extension can be a better option for restoring such ETT. With the advances in adhesive dentistry, various direct bulk fill composite resin materials have been tried for restoring ETT. Onlays with varying degree of intraradicular extension can serve to provide extra retention without requiring the need to do added post space preparation to accommodate post that would further weaken the ETT. An intraradicular depth of 3mm has been found to be optimal. Exploration of available literature to the best of our knowledge did not reveal any studies done to evaluate the effect of varying intra-radicular depths and use of flowable bulk fill material into these preparations. Stress distribution of these restorations is a major factor for longevity of the restorations. Finite element analysis is deemed as an effective tool to evaluate biomechanical characteristic and stress distribution of dental restorative material and system whereby results carry significant clinical implication. The current Finite Element analysis will assess and compare the stress distribution in ETT mandibular first molar restored using direct bulk fill composite resin onlay with varying intraradicular extension.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparative Evaluation Of Microleakage In Premolar Class V Cavities, Restoredwith Bioactive Composite Resin With And Without A Bioactive Liner-A Dye Extraction invitro Study" with Dr. Swathi S as the primary investigator and Dr. Veena S Pai as the guide from the Department of Conservative Dentistry & Endodontics.

Restoration of class V lesions poses a great technical challenge. Despite newer restorative materials and techniques, microleakage still persists. Microleakage can further lead to secondary caries, sensitivity, pulpal inflammation and necrosis. Microhybrid or nanohybrid composite material is usually preferred due to esthetics and their elastic modulus similar to natural dentin. However, polymerization shrinkage, isolation difficulty and bonding to cervical dentine may be a concern. Also fluoride release can be advantageous. The latest Bioactive composite material, Activa Pronto is claimed to have good ionic bonding to the tooth, is esthetic and have better biomechanical properties. Its precursor, Activa bioactive liner can be used under Activa Pronto in deep preparations closer to pulp for its added advantage of self etching and self bonding property, in addition to bioactive properties. The current in-vitro study will evaluate microleakage of class V preparations in 60 premolars restored with Activa Pronto composite resin with/without Activa bioactive liner.

As this is an invitro study done on extracted teeth and has least ethical implications, ethical clearance is given outright by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Stress Distribution In Fractured Flared Endodontically Treated Maxillary Central Incisors Restored With Composite Core- Full Crown, Fibre Post-Full Crown, Everstick Post-Full Crown And Endocrown Using Lithium Disilicate Ceramic Material – A Finite Element Analysis." with Dr. Anusha Sequeira as the primary investigator and Dr.Vedavathi B, Department of Conservative Dentistry & Endodontics as the Guide.

Trauma to developing dentition results in flared canals and tooth discoloration necessitating intraradicular reinforcement in addition to Full Crowns to provide Esthetics. Prefabricated fibre posts in flared canals would result in an increase in the amount of luting resin thickness coronally. Also, customizable tooth colored Everstick posts though preferred, require a separate composite core build up. Both these post systems debond at the interface. Endocrowns- one piece monolithic corono-radicular stabilisation can be used alternatively.

The current Finite Element Analysis will assess and compare the stress distribution in fractured and flared maxillary central incisors restored using composite core-Full crown, fiber post-Full crown, Everstick post-Full crown and Endocrown using Lithium DiSilicate ceramic material.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as “Comparative Evaluation Of Microleakage In Class Ii Cavities Restored With Snow Plow Technique Using Flowable Or Preheated Packable Bulk Fill Composite Resin As Gingival Increment By Dye Extraction Method – An In Vitro Study.” with Dr V. Geetha as the primary investigator and Dr.Ranjini M.A, Department of Conservative Dentistry & Endodontics as the Guide.

Bulk Fill composite resins have improved depth of cure of at least 4 mm eliminating need for multiple layering. However, in deep preparations, marginal adaptation and flow is questionable even with bulk fill resins. To overcome these challenges, snow plow technique was introduced, in which a less viscous material is applied as gingival increment, overlaid by packable composite resin and co cured. Rest of the preparation is restored with packable bulk fill composite resin. The other method is by preheating composite resin which ensures increased flow, higher degree of polymerization and decrease in marginal gaps. The current study will assess microleakage in class II preparations in 50 mandibular molar teeth restored with snow plow technique using flowable and preheated packable bulk fill composite resin as gingival increment.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Developing And Validating An Orthodontic Artificial Neural Network Tool That Predicts Orthodontic Diagnosis -- An AI Study." with Dr. Shantanu Kumar as the primary investigator and Dr. Hemanth M, Department of Orthodontics & Dentofacial Orthopaedics, as the Guide.

Diagnosis forms the crux and essence of orthodontics. Comprehensive deliberate evaluation of numerous factors makes Diagnosis a complex process without any objective patterns, and vigorously relies on the subjective judgement of the orthodontists. Generally, most orthodontists make a decision with data from the clinical evaluations, photographs, dental models, and radiographs based on their experience and knowledge. Since there is no set formula or equation for the treatment plan, the decision depends on the practitioner's heuristics as a rule. This often causes intra-clinician and inter-clinician variability in the prediction of diagnosis. Moreover, variations in prediction of diagnosis can occur between experienced and less-experienced practitioners. Orthodontists acquire expertise with many years of clinical experience and practice. Machine learning models which have the ability to learn by pattern recognition and algorithms using data fed into the computer, can gain this expertise using algorithms in a very short timeframe. It uses a training dataset of massive data collected from many expert orthodontists (collective expertise). By this method of learning, there is diminished odds of error, missing out on data, inter and intra clinician variability and enhancement of the accuracy in prediction of diagnosis and treatment planning. Therefore, this study aims at constructing and training a machine learning predictive model which can predict a broader framework of the orthodontic diagnosis. In the near future, these predictive models can turn into a valuable Clinical Decision Support System (CDSS) in the field of orthodontics

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparative Evaluation Of Plaque Accumulation During Fixed Appliance Treatment, Bonded With Conventional Composite And Nano-Particles Containing Composite" - A Split Mouth Randomized Controlled Trial" with Dr. Chandni Keshri as the primary investigator and Dr. Karthik J Kabbur, Department of Orthodontics & Dentofacial Orthopaedics, as the Guide.

Fixed appliance therapy is an integral part of adult orthodontics but sometimes it comes with a cost of demineralization and white spot lesions. So it is important to eradicate this cause for a successful fixed appliance therapy. The current research is aimed at finding out whether TiO₂ nanoparticle containing composite is effective in reducing plaque accumulation and improving periodontal health when used for bracket bonding compare to conventional composite. This study will further help in eradicating the primary causative factor that is plaque for demineralization . The primary investigator is instructed to stick to standard clinical protocols and maintain confidentiality of data

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparison Of Rate Of Maxillary Canine Retraction With And Without Submucosally Administered Injectable Platelet-Rich Fibrin (I-Prf) Among Orthodontic Cases Indicated For First Premolar Extraction – A Split Mouth Randomised Control Trial" with Dr. Dharini M as the primary investigator and Dr. Dr. Karthik J Kabbur, Department of Orthodontics & Dentofacial Orthopaedics, as the Guide.

The orthodontic treatment duration is approximately 1-2 years and even more for extraction cases. Prolonged treatment duration leads to many issues like high risk of caries, external root resorption, which can prompt especially adults patients to abandon orthodontic treatment. The increasing demand for orthodontic treatment in the adult patients has given momentum to finding methods to achieve accelerated orthodontic tooth movement. This has led to research in different modalities including chemical, surgical and mechano-surgical methods, but all of the above approaches, though, proven to be effective, vary largely in the degree of effectiveness. Therefore, for achieving equally effective biological response from the minimally invasive procedure should be used. One of the recent advances in local agents to accelerate the rate of orthodontic tooth movement is platelet based preparations. Since a liquid injectable platelet-rich fibrin (i-PRF) is autologous preparation, rich in growth factors and cytokines and is administered locally there is no undue systemic effects and complications. And is also easily applied, minimally invasive, has a low cost. The aim of this study is to assess and compare the rate of maxillary canine retraction between the sites administered and not administered with submucosal i-PRF

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparison of Palatal Rugae Pattern And The Number Of Palatal Rugae Between Subjects With Different Sagittal Skeletal Relationships Visiting The Department Of Orthodontics in Dayananda Sagar College Of Dental Sciences, Bangalore Using Extra Oral Scanning Of Dental Study Cast – A Cross Sectional Prospective Study" with Dr. Adnan A Mandaty as the primary investigator and Dr. Goutham K, Department of Orthodontics & Dentofacial Orthopaedics, as the Guide.

There is a growing research interest in determining possible correlation between palatal rugae and skeletal malocclusion. The palatal rugae are unique structures that are inalterable in their position and pattern throughout the life of an individual. Palatal rugae pattern may be considered as an alternative source of information and for identification which enables the search field to be narrowed. The 3D scanner will measure a number of intra-oral readings and create a three-dimensional image using a mathematical algorithm. Early diagnosis for skeletal malocclusion is of utmost importance for early intervention and prevention of severity of developing skeletal malocclusion. If an association exist between palatal rugae and skeletal malocclusions, it can be used as a supplementary diagnostic aid. Using extra oral scanning on dental study cast we can measure and analyze the pattern of rugae in different skeletal malocclusions. The primary investigator is instructed to stick to standard clinical protocols and confidentiality of data.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparison Of General Pain Threshold In Healthy Individuals And Temporomandibular Disorder Patients With An Algometer. with Dr. Samiksha Gour as the primary investigator and Dr. Prashanth N.T Department of Oral & Maxillofacial Surgery as the Guide.

Temporomandibular disorders (TMD) is a heterogeneous family of musculoskeletal disorder. TMD pain intensity has mostly been a subjective study of pain experienced by the patients which needs to be quantified objectively. The mechanism of TMD development is not yet well established. It is unknown whether TMD is related more to the peripheral or central nervous systems. Therefore, there is a need for a study investigating the general pain perception in TMD patients order to understand the underlying mechanism of TMD. In this study, the difference in general pain perception between TMD patients and healthy subjects will be done using an algometer. The results of this study will give a prospective hindsight towards the choice of analgesic to be used along with the dosage and the kind of treatment modalities to be provided for TMD patients can also be determined through the readings following statistical analysis. This study is being done in 156 subjects. 78 healthy subjects (ASA class 1) and 78 patients visiting OPD of Dept. of OMFS, DSCDS with a complaint of pain and will be diagnosed by Research Diagnostic Criteria into TMD. Clinical protocols shall be followed as per guidelines and consent shall be obtained from the patient.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Evaluation Of Implant Stability Quotient Using Resonance Frequency Analysis In Immediate And Non Immediate Implant Placements In The Mandible: A Clinical Split Mouth Study with Dr. Pooja Vanyar as the primary investigator and Dr. Shobha E.S., Department of Oral & Maxillofacial Surgery as the Guide

Primary and secondary implant stability is of high importance for survival and success of dental implants in the short and long term. There are various methods to evaluate implant stability. Resonance frequency analysis (RFA) is a method which shows almost perfect reproducibility and repeatability after statistical analysis. The RFA technique has the potential to provide clinically relevant information about the state of implant bone interface at any stage of treatment. This study adds an insight of the implant stability measurement method at different time intervals in mandible with the chosen Penguin device. The implant stability quotient (ISQ) values obtained in immediate and non-immediate implants at placement (T0), after 4 weeks (T1) and after 16 weeks (T2) i.e. at different time intervals in the mandible are evaluated and compared. This split mouth study is being done in 24 patients visiting the OPD of Dept. of OMFS, DSCDS. The ISQ values obtained in four directions (buccal, lingual, mesial and distal) are recorded at the time of placement (T0), after 4 weeks (T1) and after 16 weeks (T2). The highest ISQ value among these will be considered for statistical analysis and will be correlated with the hypothesis. Clinical protocols shall be followed as per the guidelines and consent shall be obtained from the patient.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparative Evaluation Of Tear Strength Of Two Platinum Based Maxillofacial Silicone Materials - Silcozest 1st With And Without Addition Of 2-2.5% Zinc Oxide (Zno) Nanoparticles And Technovent (M511) – An In Viro Study"" with Dr. Sujana S as the primary investigator and Dr.Sarandha D.L, Department Prosthodontics as the Guide.

Maxillofacial materials used for rehabilitation of any facial defects should possess some ideal mechanical properties, one among the important properties is resistant to tear which has to be enhanced to satisfy the ideal requisites, certain studies have revealed enhancement of tear strength, with addition of nanoparticles of Zinc Oxide.

Most of the maxillofacial silicone materials being used are imported and quite expensive and there are very limited indigenous silicone materials. Silocrest LSR- Platinum based maxillofacial silicone is one such material which is less studied. Specimens will be prepared as per the dimensions in accordance with **American Society for Material and Testing (ASTM) D624 standards** respectively. This study intends to compare tear strength of 22 Silocrest LSR without addition of nanoparticles and 22 Silocrest LSR with addition of 2-2.5% Zinc Oxide (ZnO) nanoparticles with 22 Technovent (M511) maxillofacial silicone materials. All the specimen will be tested for tear strength using a Universal Testing Machine (UTM) with a jaw separation load of hundred Newton (N) at the speed of 500 ± 50 mm/min (20 ± 2.0 in. /min). The data so obtained with respect to tear strength of all the specimens will be subjected to statistical analysis. One way ANOVA is used to compare the tear strength between three groups. If P value less than 0.05 a post hoc test (Tukey's test) applied. If the data does not fulfil the requirements of a parametric test, nonparametric ANOVA (Kruskal-wallis test) would be done followed by a suitable post hoc test (Mann-Whitney U test). In this study the significance level (P) is fixed at 0.05 and confidence level at 95%.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as “Comparative Evaluation Of Marginal Fit Of 3D Milled Zirconia Copings Fabricated Using Dentsply Sirona Lab Scanner And Smilebox Indigenous Lab Scanner- An In Vitro Study” with Dr.Monika.N as the primary investigator and Dr.Shreeharsha T.V, Department Prosthodontics as the Guide.

The workflow in dentistry and particularly in fixed prosthodontics, are increasingly moving towards automation and digitisation. A crucial step in digitising the workflow is the use of scanners to digitise the oral soft and hard tissues of the patient. The use of scanners and CAD/CAM technology can help minimise a number of laboratory procedures such as wax pattern fabrication, articulation, die cutting, investing and casting. One of the reason for scanners not being widely used is the high cost. Smilebox Indigenous 3 D lab scanner uses stereophotogrammetry imaging and computer vision based image reconstruction. Its advantages include lower cost, simple technology and colour image .This study is aimed at assessing and comparing the marginal fit of 3 D milled zirconia copings fabricated using Dentsply Sirona Lab Scanner and Smilebox Indigenous 3 D Lab Scanner. 34 Mandibular right first molar typhodonts will be prepared for all ceramic restoration following the principles of tooth preparation. They will be scanned using the two lab scanners in accordance to the manufacturer's guidelines. Zirconia copings will be milled. Replicas of the internal surface of the zirconia copings were made using light body and putty impression material. The replicas were then sectioned and the marginal gap was measured using a stereo microscope.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "A COMPARATIVE ASSESSMENT OF PRIMARY STABILITY BETWEEN CONVENTIONAL AND NANOCOATED MINI-IMPLANTS IN GOAT MANDIBLE - AN INVITRO SPLIT MOUTH STUDY" with Dr. TEJAS RAJEEV PIKLE as the primary investigator and Dr. Karthik. J. Kabbur, Department of Orthodontics & Dentofacial Orthopaedics, as the Guide.

Anchorage is an important issue in orthodontics. Conventionally, posterior tooth acts as an Anchorage system and anchor loss is the main drawback in such cases. Mini implants were introduced as an absolute Anchorage systems. Improper placement sites of mini implants can be a reason for failure. Several factors related to implants and related to bone have an influence on success or failure of mini implants. Nano coated mini implants are the latest after mini implants introduced into the market. The current study is comparing the primary stability and removal of torque between nano coated mini implants and conventional mini implants which as inserted into Selected goat mandibles. As the research is being done on goat mandibles obtained from the butcher shop and goats are sacrificed for their meat, and ethical implications are least, ethical consent is given outright considering it as an in vitro study.

Mr. Nagesh Puranik	Layperson

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "COMPARATIVE EVALUATION OF CYTOTOXICITY OF SMART TRACK, LEONE AND DURAN THERMOPLASTIC MATERIALS USED FOR ALIGNERS WITH AND WITHOUT ADDING NIGELLA SATIVA LINN SEED EXTRACT – AN INVITRO STUDY" with Dr.SYED OMER as the primary investigator and Dr. Sharmada B.K, Department of Orthodontics & Dentofacial Orthopaedics, as the Guide.

Thermoplastic aligner materials are being used in orthodontics for a considerable period. Bisphenol A and isocyanite are produced from these materials which may affect the oral health and maybe also cytotoxic. The current research is attempting to find out, whether there is a difference in cytotoxicity between three different thermoplastic aligner materials and also to find out whether adding Ni sitiva N seed extract can reduce the cytotoxicity. As this is an in vitro study done on cell lines, it does not have any ethical implications. Ethical clearance is given outright.

Ethical Clearance is given and approval is granted by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

Sincerely

Mr. Nagesh Puranik	Layperson

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "A COMPARATIVE EVALUATION OF SURVIVAL RATES OF MANDIBULAR FIXED LINGUAL RETAINERS, BONDED WITH TiO₂ NANOPARTICLE CONTAINING COMPOSITE AND CONVENTIONAL COMPOSITE – A RANDOMIZED CLINICAL TRIAL" with Dr. Shravanthi M.N as the primary investigator and Dr. Goutham. K, Department of Orthodontics & Dentofacial Orthopaedics, as the Guide.

Fixed lingual retainers as bonded to mandibular anterior teeth are established as integral part of orthodontic treatment to prevent relapse or secondary crowding of mandibular incisors. The survival of these retainers is important for the success of the treatment. In this connection various composites are used for bonding the lingual retainers. The current research is aimed at finding out whether nano bonding composite provides higher survival rates and better periodontal health when compared to conventional composites. The primary investigator is instructed to stick to standard clinical protocols and maintain confidentiality of data.

Ethical clearance is given and approval is granted. The PG shall submit the detailed final report at the closure of the study.

Sincerely

Dr. Hemanth.M

Dr. Chandrashekar Janakiram	Chairperson
Dr. Nagesh.L	Member Secretary
Dr. Vasundara	Pharmacologist
Dr. Rajeshwari.N	Basic medical scientist
Mrs. Tara Madusudhan	Sociologist
Mr. Subramanya Prasad	Advocate
Mr. M.S. Sridhara	Religious Person and Philosopher
Mr. Nagesh Puranik	Layperson

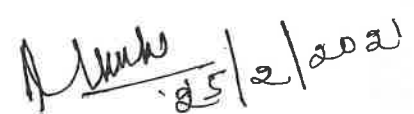

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "A COMPARATIVE ASSESSMENT OF COEFFICIENT OF FRICTIONAL RESISTANCE AND SURFACE ROUGHNESS BETWEEN NANOCOATED ORTHODONTIC BRACKETS AND ARCHWIRES WITH CONVENTIONAL ORTHODONTIC BRACKETS AND ARCH WIRES – AN EXPERIMENTAL IN VITRO STUDY" with Dr.B.ALIF AHMED as the primary investigator and Dr. Hemanth. M, Department of Orthodontics & Dentofacial Orthopaedics, as the Guide.

Friction is a major problem in fixed appliance therapy. Overcoming frictional resistance is very important because friction may hamper the treatment and prolong the treatment time. Surface treatment of archwire and brackets is believed to reduce the frictional forces and facilitate movement of teeth. The current research is being done to compare zinc oxide, mono particles, coated arch wires and brackets with respect to their coefficient of friction when used in different combinations. As this research is being done on specifically designed models outside the human or animal bodies, The ethical implications are very least and ethical clearance is given outright.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "THE ASSOCIATION BETWEEN FOOT POSTURE AND CRANIOCERVICAL POSTURE TO SKELETAL MALOCCLUSION IN CHILDREN – A CROSS SECTIONAL SURVEY" with Dr. BASIL AHSAL N as the primary investigator and Dr. Hemanth. M, Department of Orthodontics & Dentofacial Orthopaedics, as the Guide.

It is hypothesized that functional disturbance (chewing and swallowing) of the masticatory muscle, may be transmitted through muscle chains and may promote postural changes, painful conditions affecting the musculature of head, neck, shoulders, lower back and leg. This may also be reversed and the skeletal system may be influenced by imbalance and other areas of the body. In the current research data related to cranio-cervical posture and foot posture will be collected from selected research participants and any correlation between the two variables are going to be identified. The primary investigator is hereby instructed to maintain the confidentiality of the data.

Ethical clearance is given and approval of the study is granted. The primary investigator shall submit the detailed report at the closure of the study.

Sincerely

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparative evaluation of fracture resistance of anterior endocrowns using nanoceramic and indirect composite resin materials- an invitro study." with Dr. Payel Mazumdar as the primary investigator and Dr.Vedavathi B, Department of Conservative Dentistry and Endodontics, as the Guide.

Co-ordinators

- Dr. Sunil.S
- Dr. Pallavi Nanaiah.K
- Dr. Sourabha K.G
- Dr. Ranjini M.A
- Dr. Preeti Patil
- Dr. Brunda
- Dr. Suchitra

Anterior teeth with less coronal tooth structure require either placement of post to retain core and to improve retention of definitive restoration or Endocrowns which obtain macromechanical retention anchoring into the pulp chamber and micromechanical retention by adhesives. Fracture resistance provided by anterior Endocrowns made of newer nanoceramic and indirect composite materials have not been compared. The current study is to compare and evaluate the fracture resistance of endodontically treated 42 maxillary central incisors restored using glass fiber post-Lithium disilicate crown with Endocrowns made of nanoceramic and indirect composite resin materials. As this is an invitro study with least ethical implications, ethical clearance is given outright by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

Sincerely

Bengaluru

The Institutional Review Board (IRB) meeting was held on 17-02-2021 from 9am to 12.30pm in the Seminar Hall, Department of Orthodontics, 5th Floor of DSCDS and the meeting was chaired by Dr. Chandrashekar Janakiram. The following members of Institutional Ethical Committee (IEC) attended the meeting.

Dr. Chandrashekar Janakiram	Chairperson
Dr. Nagesh.L	Member Secretary
Dr. Vasundara	Pharmacologist
Dr. Rajeshwari.N	Basic medical scientist
Mrs. Tara Madusudhan	Sociologist
Mr. Subramanya Prasad	Advocate
Mr. M.S. Sridhara	Religious Person and Philosopher
Mr. Nagesh Puranik	Layperson

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparative evaluation of the fracture resistance of different ceramic anterior endocrowns – an invitro study" with Dr. A Arjun Pradip as the primary investigator and Dr. Vedavathi B, Department of Conservative Dentistry and Endodontics, as the Guide.

Endodontically treated teeth (ETT) with substantial loss of coronal structure need to provide extra retention either in the form of post-core or otherwise to retain the crown. Fracture resistance of ETT with esthetic post-core-crown depends on the adhesion provided by remaining tooth structure. Endocrown restorations are mechanically retained into the pulp chamber and micromechanically by adhesives. Minimally invasive anterior Endocrowns made of different Ceramic materials have shown better fracture resistance compared to post-core restored teeth. Nanoceramics and polymer infiltrated ceramic materials are two such recently developed materials suited for anterior Endocrowns. The study intends to compare the fracture resistance of 42 anterior teeth Endocrowns fabricated with these different Ceramic materials. As this is an invitro study with least ethical implications, ethical clearance is given outright by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparative evaluation of microleakage in class v cavities, in premolars, restored with two novel bioactive restorative materials (activa bioactiva restorative and activa pronto)- an invitro study" with Dr. Pracheth T.V as the primary investigator and Dr. Veena Pai S, Department of Conservative dentistry and Endodontics , as the Guide.

Glass Ionomer Cement (GIC) and composites have been successfully used for restoration of cervical lesions. Studies have shown GIC to be beneficial as it adheres chemically and releases fluoride having anti plaque effect preventing secondary caries, but does not have enough strength and wear resistance. Composite resins with improved physical and mechanical properties are preferred but in class V restorations it is difficult to finish and polish these restorations leading to plaque accumulation and secondary caries. "Activa bioactive restorative" is a dynamic smart material which is aesthetic, chemically bonds to teeth and seals against microleakage and moisture friendly. Recently, Bioactiva Pronto has been developed, with improved properties. This study will be conducted to evaluate and compare microleakage of newer bioactive restorative material Bioactiva Pronto, Activa bioactive restoratives with nanohybrid composites at occlusal and gingival margin of class V cavities on 60 extracted maxillary premolars. As this is an invitro study with least ethical implications, ethical clearance is given outright by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

Dr. Brunda
Dr. Suchitra

Pre-fabricated Glass fiber posts are commonly used in endodontically treated teeth with less remaining coronal tooth structure which provides foundation for definitive restoration. The bond durability between the fiber post and the root-dentin is an important issue for providing long-term clinical success. Self-adhesive resins are used for cementation of these posts. Bond longevity and stability of the adhesive/dentin interface are adversely affected by various factors resulting in its degradation. Studies have shown that pretreatment of coronal-dentin surface with resveratrol-ethanol solution maintained the bond strength and durability. This invitro study will assess and compare immediate and delayed pushout bond strength of the fiber post in 42 endodontically treated single rooted premolars luted using self-adhesive cement with and without pretreatment of root dentin using resveratrol. As this is an invitro study with least ethical implications, ethical clearance is given outright by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Title- Comparative evaluation of the cleaning and shaping ability of Trunatomy and Hyflex EDM file system – an invitro study." with Dr. Abijeth. B as the primary investigator and Dr. Swapna D V, Department of Conservative Dentistry and Endodontics, as the Guide.

The primary objective of root canal shaping and cleaning is to remove the infected soft and hard tissues while retaining the integrity of the radicular anatomy. The use of Nickel-Titanium rotary instruments have highly improved the quality of the cleaning and shaping of the root canals. However, the multiple file system, not only over shape the canal, but also increases the formation of the smear layer.

To prevent this single-file rotary system's with reduced taper are recommended. Hyflex EDM is a single file system, manufactured using electrical discharge machining. Trunatomy is a newer single Ni-Ti system in the market, which claims to preserve the root dentin and canal anatomy because of its slim design, regressive taper along with irrigation tips. In the current study, comparison is done between Trunatomy and Hyflex EDM systems on shaping ability and cleaning ability in 102 extracted teeth. As this is an invitro study with least ethical implications, ethical clearance is given outright by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparative evaluation of fracture resistance in overlyflared endodontically treated anterior teeth restored using prefabricated fibre reinforced composite post and rebilda post GT system - an invitro study" with Dr.Prathiksha Karunakar Shetty as the primary investigator and Dr.Yashwanth.G, Department of Conservative Dentistry and Endodontics, as the Guide.

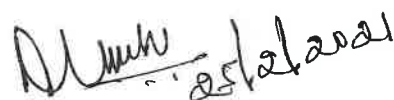

Endodontically treated teeth (ETT) with less coronal tooth structure and overlyflared canals need preservation of remaining dentinal thickness (RDT) and some form of corono-radicular stabilization. The most common type of reinforcement is through the post and core system. Prefabricated fibre posts when used in wider canals require larger amount of luting cement to fill the space between the post and canal which leads to compromised bond strength and failure in bonding. Rebuilda post GT is a novel post system, which is a bundle of glass fibre reinforced composite post consisting of fine individual posts that can be spread and distributed in the entire root canal anatomy. However, the fracture resistance provided by this novel post system needs to be assessed in overly flared canals in anterior teeth. The current in-vitro study will assess and compare the fracture resistance in anterior teeth overlyflared endodontically treated 42 maxillary central incisors restored using prefabricated fibre reinforced composite post and Rebuilda post GT system. As this is an invitro study done on extracted teeth and has least ethical implications, ethical clearance is given outright by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

Date: 24-02-2021

To
Dr. Shelvi Pandey
1st MDS
Department of Prosthodontics Including Crown And Bridge
Batch 2020
Dayananda Sagar College of Dental Sciences (DSCDS)
Bengaluru

The Institutional Review Board (IRB) meeting was held on 17-02-2021 from 9am to 12.30pm in the Seminar Hall, Department of Orthodontics, 5th Floor of DSCDS and the meeting was chaired by Dr. Chandrashekar Janakiram. The following members of Institutional Ethical Committee (IEC) attended the meeting.

Dr. Chandrashekar Janakiram	Chairperson
Dr. Nagesh.L	Member Secretary
Dr. Vasundara	Pharmacologist
Dr. Rajeshwari.N	Basic medical scientist
Mrs. Tara Madusudhan	Sociologist
Mr. Subramanya Prasad	Advocate
Mr. M.S. Sridhara	Religious Person and Philosopher
Mr. NageshPuranik	Layperson

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparative Evaluation of Stress Distribution At Implant-Abutment Junction, Crestal And Peri Implant Bone Region of Extra Short Titanium and Titanium – Zirconium Implants on Immediate and Delayed Loading: A Three-Dimensional Finite Element Analysis" with Dr. Shelvi Pandey as the primary investigator and Dr. Smitha Sharan, Department of Prosthodontics Including Crown and Bridge, as the Guide.

Dental implants have become increasingly important in oral reconstruction. Patients with reduced bone height show many difficulties when treated with conventional dental implants, so clinicians usually use more invasive and expensive techniques such as bone grafting, bone regeneration, or the use of unconventional implants. An alternative to these invasive treatments is short and extra short implants, which are less invasive and have good predictability. Of all the available Ti alloys, Ti-6Al-4V (TAV) is the most commonly used alloy in dentistry. Currently, continuous technological development offers newer materials such as Zirconium, Titanium-Zirconium alloy as alternative treatment. One of the main advantages of Ti-Zr alloys over Ti is the biocompatibility and improved mechanical properties. Hence, Ti-Zr implants are recommended for small diameter implants, mainly in region of high occlusal load. Since not many studies have compared extra short Ti and Ti-Zr, the present study was undertaken to compare extra short Ti and Ti-Zr on immediate and delayed loading. It is 3D Finite Element Analysis where Three-dimensional maxillary model will be constructed from a CBCT scan of a subject with adequate bone mass and 3D FEM models will be created to simulate implant geometry. Analysis would be done using Ansys 14.5 software. Mesh models would be created using: Hypermesh 11 software. Mechanical Loading would be done using Solid Edge v19 software. Since in this study deductive logic is being applied, sample size estimation is not applicable. Informed consent will be taken for the patient for taking CBCT. It is an in vitro study with not much ethical implication. However, the primary investigator is instructed to maintain the confidentiality of the data about bone characteristics obtained from one individual patient for developing FEM model.

Ethical Clearance is given and approval is granted by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

Sincerely

Dr. Hemanth. M

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Assessment and Comparison of Dimensional Stability and Surface Accuracy of Alginate After Disinfecting with Quaternary Ammonium Compound (QAC), Phenol Based Disinfectant And Sodium Hypochlorite – An In Vitro Study" with Dr. C M. Zameer Ahmed as the primary investigator and Dr. Sarandha D. L, Department of Prosthodontics Including Crown and Bridge, as the Guide.

Disinfection of dental impressions before progressing with the lab procedures is most critical since it forms the main medium for the spread of infection and is a fundamental step to prevent the transmission of microorganisms. The properties of the impression material should be preserved, irrespective of the disinfectant used. Alginate is the most commonly used and one of the most criticized impression materials in terms of its disinfection process due to its dimensional instability, loss of surface details and highest retention of bacteria because of its hydrophilic nature. Disinfection of alginate impressions can be carried out either by Immersion or by spraying method. Immersion method is not considered ideal, as alginate absorbs water and distorts due to its hydrophilic properties. The Spray method has been proposed in literature as a mode of disinfection for alginate since it limits the amount of distortion. This study intends to compare the dimensional stability and surface accuracy of 53 alginate impressions treated with QAC based PROSEPT IMPRESSION, 53 impression treated with Phenol based VYROL and 53 impressions treated with conventional disinfectant like Sodium hypochlorite. Since it is an in vitro study, ethical clearance is not required. The dimensional stability and surface accuracy are measured using Stereo Microscope/ a Confocal microscope. Since it is an in vitro study, with not any ethical implications, outright clearance is given.

Ethical Clearance is given and approval is granted by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

Sincerely

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparative Evaluation of the clinical efficacy of Nigella Sativa (0.1%) Mouthwash and Chlorhexidine Gluconate (0.2%) in patients with gingivitis: A Randomised Control Trial" with Dr. AshwiniUppin as the primary investigator and Dr. Savita A. M, Department of Periodontics, as the Guide.

Chlorhexidine gluconate is considered as the gold standard mouthwash in prevention and treatment of gingivitis but it has multiple side effects when used for long duration like staining of tongue and teeth, taste alteration and increased calculus formation. There is a felt need for naturally occurring, indigenous and cost effective oral hygiene aid having similar positive effects chlorhexidine but with no adverse effects when used for long duration. In this research, Nigella sativa, commonly known as black seed (kalonji), a herbal product is being used as a mouth rinse. It is used as 0.1% mouthwash daily by one group and the other group would use 0.2% chlorhexidine mouthwash. The groups shall be randomly allocated using concealed random allocation technique. The primary investigator and the guide shall stick to the clinical protocols while examining the patients and any adverse effects or events shall be brought to the notice of IRB immediately.

Ethical Clearance is given and approval is granted by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

Sincerely

Dr. Hemant M.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Clinical and Microbiological Evaluation of Photodynamic Therapy as an Adjunct to Scaling and Root Planing in Periodontitis With Type II Diabetes Mellitus: A Split Mouth Randomized Controlled Clinical Trial" with Dr. Niveditha S as the primary investigator and Dr. Archana R Naik, Department of Periodontics, as the Guide.

The ultimate goal of periodontal therapy is to arrest the progression of periodontal disease by eliminating supragingival and subgingival plaque. Scaling and root planning (SRP) are considered as gold standard for periodontitis. However, there are certain sites on the teeth, which are difficult to access by mechanical scaling and root planning. Infectious cells may persist in those areas. Laser may be used as adjunctive treatment for pocket disinfection. Untreated periodontitis may result in tooth loss and further complications. Periodontitis is one of the complications of diabetes. Bacterial pathogens such as P. gingivalis and A. Actinomycetem comitans and P. Intermedia are some of the major periodontal pathogens implicated in periodontitis among type 2 diabetes patients. SRP plus Photodynamic therapy (PDT) using 970nm diode laser and ICG as photosensitizer in periodontal pocket disinfection is being compared with SRP alone in selected type 2 diabetes mellitus patients. The objective is to find out additional benefits of PDT when used in combination with SRP. Strict clinical protocols shall be followed for infection control and any adverse reactions shall be immediately reported to the IRB. Written voluntary Informed consent shall be obtained from all the participating patients.

Ethical Clearance is given and approval is granted by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

Sincerely

Dr. Hemanth. M

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparison of Clinical And Radiographic Assessment of Efficacy of Eggshell-Derived Nanohydroxyapatite (Enha) And Demineralized Freeze Dried Bone Allograft (DFDBA), Both covered with Platelet-Rich Fibrin (PRF) In Socket Preservation - A Randomized Controlled Clinical Study" with Dr.Neha V Nainoor as the primary investigator and Dr.Shobha E. S, Department of Oral and Maxillofacial Surgery, as the Guide.

Bone regeneration is a major challenge in reconstructive surgery. Different types of bone substitutes are frequently used in the surgical procedure to augment and regenerate hard tissues. The ideal bone substitute should be biocompatible, osteoinductive or osteoconductive, and have satisfactory mechanical properties. Demineralized freeze-dried bone allograft (DFDBA) covered with PRF membrane is commonly used for socket preservation technique. However these particles remain in the site for longer than a year acting as bone matrix, weaken the host bone, delay normal bone formation by interfering with osteoclasts ability to resorb the particles. The eggshell powder has been examined in rats for bone healing. In this study, egg shell derived nanohydroxyapatite along with PRF is been used as a barrier membrane to assess pain, wound healing, changes in lamina dura, crestal bone level and bone density in mandibular extraction sockets. They are comparing the results with commonly used DFDBA covered with PRF membrane. This study is being done among 20 patients visiting OPD of dept. of OMFS, DSCDS who require bilateral extraction of teeth in the lower arch. Random allocation of two different interventions on 2 sides of the mandibular arch in each patient is done using standard random allocation technique. Clinical protocols shall be followed as per the guidelines and consent shall be obtained from the patient.

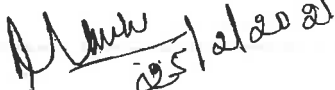

Ethical Clearance is given and approval is granted by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

Sincerely

Ref: 107 - IRB - 2021

Date: 24-02-2021

To
 Dr. Nithin Shaju
 1st MDS
 Department of Oral and Maxillofacial Surgery
 Batch 2020
 Dayananda Sagar College of Dental Sciences (DSCDS)
 Bengaluru

The Institutional Review Board (IRB) meeting was held on 16-02-2021 from 9am to 12.30pm in the Seminar Hall, Department of Orthodontics, 5th Floor of DSCDS and the meeting was chaired by Dr. Chandrashekar Janakiram. The following members of Institutional Ethical Committee (IEC) attended the meeting.

Dr. Chandrashekar Janakiram	Chairperson
Dr. Nagesh.L	Member Secretary
Dr. Vasundara	Pharmacologist
Dr. Rajeshwari.N	Basic medical scientist
Mrs. Tara Madusudhan	Sociologist
Mr. Subramanya Prasad	Advocate
Mr. M.S. Sridhara	Religious Person and Philosopher
Mr. NageshPuranik	Layperson

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Assessment of The Accuracy of Stereolithographic Surgical Guide by Comparing Deviations in terms of position and angulation of Implant Placed in the model and the patient - An Experimental Study" with Dr. Nithin Shaju as the primary investigator and Dr. Vinod Rangan, Department of Oral and Maxillofacial Surgery, as the Guide.

Implant dentistry involves the rehabilitation of lost teeth in the dental arch to restore form and function. Placement of dental implants in the proper position and angulation has always found to be a challenge. CAD/CAM surgical guides aid in planning the implant placement in the desired angulation and position. However, the accuracy of these surgical guides are not yet explicitly determined. This study is being conducted to assess the accuracy of the use of 3D stereolithographic surgical guide in 30 implants. Patients are selected based on specific selection criteria from a pool of patients visiting dept. of OMFS, DSCDS who are willing for implant placement. Recommended clinical protocols shall be followed while planning the placement of implants and written voluntary consent shall be obtained from the patient.

Ethical Clearance is given and approval is granted by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

Sincerely

Dr. Hemant M.

Batch 2020
Dayananda Sagar College of Dental Sciences (DSCDS)
Bengaluru

The Institutional Review Board (IRB) meeting was held on 17-02-2021 from 9am to 12.30pm in the Seminar Hall, Department of Orthodontics, 5th Floor of DSCDS and the meeting was chaired by Dr. Chandrashekar Janakiram. The following members of Institutional Ethical Committee (IEC) attended the meeting.

Dr. Chandrashekar Janakiram	Chairperson
Dr. Nagesh.L	Member Secretary
Dr. Vasundara	Pharmacologist
Dr. Rajeshwari.N	Basic medical scientist
Mrs. Tara Madusudhan	Sociologist
Mr. Subramanya Prasad	Advocate
Mr. M.S. Sridhara	Religious Person and Philosopher
Mr. NageshPuranik	Layperson

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparison of Salivary Alkaline Phosphatase level (S-ALP) in healthy individuals, individuals with oral potentially malignant disorders (OPMD) and oral squamous cell carcinoma (OSCC) " with Dr. Soraisam Bidyapati Devi as the primary investigator and Dr. Mahesh D R, Department of Oral Medicine and Radiology, as the Guide.

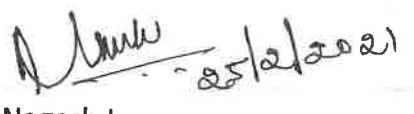

Despite various scientific advancements in preventive and therapeutic strategies, delay in diagnosis of Oral Potentially Malignant disorders (OPMD) and Oral Cancer remains one of the major causes of high morbidity and mortality. The delay in identification occurs due to lack of early detection tools for OPMD and Oral cancer. Biopsy followed by histopathological examination is still the gold standard but it is an invasive procedure and may be challenging. The use of saliva in evaluating the biomarkers for early diagnosis of oral cancer risk potential may be more appropriate as its collection is non invasive and it is in direct contact with the lesions. Salivary Alkaline phosphatase (S-ALP) is being assessed in the current research to find out whether there is a difference in the level of S-ALP between Oral Potentially Malignant disorders (OPMD) and Oral Squamous cell carcinoma (OSCC) and healthy individuals. Sample of saliva would be collected from selected research participants. The primary investigator is instructed to maintain the confidentiality with respect to the participant's identity and the data. Collected saliva shall be use only for the estimation of S-ALP levels and not for any other purpose.

Ethical Clearance is given and approval is granted by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as **“Developing and Validating an Artificial Intelligence (AI) Algorithm in determination of Cervical Vertebral Staging using Lateral Cephalograms”** with Dr. Sindhu.P as the primary investigator and Dr. Ramnarayan B.K, Department of Oral Medicine and Radiology, as the Guide.

Traditionally Cervical Vertebral Staging have been analyzed by manually tracing Lateral Cephalograms, which is time consuming and has the disadvantage of being subject to random and systematic error. Most errors occur in landmark identification, which is based on observer, experience, landmark definition, and image density and sharpness. To overcome these problems, AI technologies will be tried in the current study with an intention to generate an algorithm when applied may help in immediate diagnosis of vertebral staging. This study also includes a validation procedure. Secondary data is being used in this research. The primary investigator is instructed to maintain confidentiality with respect to data collected and not reveal the identity of the subjects from whom the data is obtained.

Ethical Clearance is given and approval is granted by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

Mr. NageshPuranik	Layperson

The IRB reviewed the submitted synopsis pertaining to Dissertation Research titled as "Comparison of Salivary IL-6 mRNA and IL-6 Protein Levels In Healthy Individuals, Oral Potentially Malignant Disorders and Oral Squamous Cell Carcinoma - A Cross Sectional Study" with Dr. Chethana Yadav M as the primary investigator and Dr. Chaya M David, Department of Oral Medicine and Radiology, as the Guide.

Oral cancer is an established public health care problem with high mortality and morbidity rate, the prognosis of which has deteriorated rather than improved. Despite various scientific advancements in preventive and therapeutic strategies, delay in OSCC diagnosis remains one of the major causes of high morbidity and mortality. Interleukin-6 mRNA (IL-6) is one biomarker that has been known to increase in oral PMD and oral cancer. In the current study, salivary IL-6mRNA and IL-6 protein is being compared between healthy volunteers, subjects with Oral Potentially Malignant disorders (OPMD) and subjects with Oral Squamous cell carcinoma (OSCC). The saliva will be collected from participants and biochemical estimation of salivary IL-6mRNA and IL-6 protein will be done using Quantitative PCR and ELISA respectively. Primary investigator is instructed to follow clinical protocols while collecting saliva and voluntary written consent shall be obtained from every participant. Saliva should be used only for estimating the above said markers and not for any other purpose.

Ethical Clearance is given and approval is granted by the IRB. Primary investigator and the guide are instructed to submit the periodic report of the progress followed by final report at the closure of the study.

Sincerely

INDUSTRY VISIT REPORT

Report:- Industry Visit to **Confident dental laboratory Pvt. Ltd**

Date of Visit:- 12/01/2022

Location:- **Kamakshipalya, Bangalore**

A industry visit was arranged to Confident dental laboratory Pvt. Ltd, Kamakshipalya, Bangalore for the post graduate students. The main objective of the visit was to demonstrate the students about the technology involved in 3D metal printing by selective laser melting and printing of Co-Cr alloy using SLM 125 3D printing machine for manufacturing of prosthetic copings and the frame work of cast partial denture and 3D resin photo curing for printing of implant guides and aligner models .

A total number of 17 Post graduate MDS students were benefitted from the industry visit. The facility in charge gave the demonstration of the technology and the application of the technology in dentistry.

Now, in accordance to the mutual desire to promote and develop activities between two centres, namely Confident Dental lab and the Dayananda Sagar College of Dental Sciences and Hospital, we agree to the following statement of intent on technology and Research based educational training programme for the faculty and students in using the Confident digital lab. This cooperation in specific areas may be designed by mutual consent and incorporated into specific additional agreements upon signature by the appropriate authorities of both the institutions.

1. The two said institutions agree to the following general areas of interest and cooperation:

- a. Sharing technical infrastructure with regard to using the Laboratory and R & D facilities at Confident dental lab , Bengaluru.
- b. Sharing of Intellectual expertise for skill oriented training of Faculty, under Graduate and postgraduate Students
- c. Sharing of knowledge and promotion of skill based training in the field of Research and Development for the benefit of Post Graduate Students as well as per the existing University requirements.
- d. Joint promotion of each other's' expertise and capabilities

2. Both the Institutions recognize that:

- a. This MoU establishes a foundation of mutual understanding and interest and does not itself entail any financial obligations for either institutions.
- b. This MoU will take effect from the date of its signing and shall be valid immediately.

This MoU is being signed on 08/11/2021 and will stand effective from this date onwards.
